

SUSSEX WOODSTOVES – 2011 PRICES

WHAT YOU SEE IS WHAT YOU PAY - WE WILL BEAT OR EQUAL GENUINE WRITTEN QUOTES FOR ANY OF THESE STOVES

The kW rating is the NOMINAL OUTPUT with a standard laboratory test load. Maximum outputs on full load may be up to 25% higher. Stoves over 5kW need fresh-air vents & all stoves need CO alarms from October 2010 Building Regs. Spacing of stoves to walls varies by make.

To size your stove, allow 1kW per 14 cubic metres of room volume: use a larger stove in taller and/or colder rooms.

All these stoves meet BS/EN 13240, Bohemia, Yeoman & Villager also HETAS-approved. Bohemia & Yeoman are HETAS & DEFRA-approved.

DEFRA-approved stoves may burn logs as well as smokeless fuel in smoke control zones. Those with 5" outlets may use 5" liners – useful in difficult chimneys

Steel stoves warm up & cool down faster than traditional cast iron stoves. Larger glass panels give better views of the flames plus more radiant heat.

Clearer view Air wash systems on all our stoves keep the glass cleaner, with dry fuel, if the controls are properly used; always keep flames in the firebox.

Warranty exclusions: any service-renewable part is excluded including door & glass seals, glass, grates, ash-cans, stove linings, dampers, closing plates, flue outlets, baffles, tools & door latches. The carcasses, doors and other cast panels have 12 month limited warranty, invalidated by abuse or adverse fuels.

BOHEMIA STOVES & SCANLINE 2" gap to sides & back, 6" top, 12" frontal hearth – no concrete hearth required
